

Reaching to our
Neighbourhood

Reduce the Impact
of cancer for all

Together We Can

Impact Report

2020-2021

SHREYA 
CANCER FOUNDATION
Be the beacon of light in someone's darkness

Message from the Managing Trustee
During 2020, we learnt many things
and one of the important one is
the health of each one of us

Dear friends

Our goal this year was to reach to our neighbourhood to reduce the impact of cancer through awareness and screening campaign to prevent cancer. But this year was the most challenging year for the cancer patients and the carers.

During the lock down screening and early detection activities decreased and eventually fully stopped.

We were also confronted with decrease in donation and incapacity to raise funds through any events. We had to do all cost cutting efforts to meet our objectives of Shreya Cancer Foundation.

The Pandemic taught us lessons like, need to stay connected, protect our people and communities as best as we can.

We worked remotely and continuously to reach our target people to keep our relationships growing.

Overall, we are proud that during pandemic we managed to push through our agenda reaching to our neighbourhood as much as we can with all your good will and support.

Thank you all.

Sincerely Yours,

Dr. Murali Krishna

On behalf of the Board of Trustees

Blood Transfusion

The many economically weak patients who come for treatment and requires blood transfusion also require blood donors. But as most of them are from faraway places and have no one to guide or support their requirement, they are in a dilemma of what to do.

Shreya Cancer Foundation reaches out to them by arranging the required blood by liaising with local blood banks and arranges the required blood for transfusion.

The patients are in a state of no money for the expenses for the transfusion. Shreya Cancer Foundation has supported such patients financially by paying for the costs.

Why blood transfusion?

This potentially life-saving procedure can help replace blood lost due to surgery or injury. A blood transfusion also can help if an illness prevents your body from making blood or some of your blood's components correctly.

Blood Transfusion Data 2020-21:			
S.No.	Name	Date	Amount
1	Abhiram	22.12.2020	2300
2	A.Rithik	23.12.2020	1100

Shreya Cancer Foundation has procured iBreast Exam device to help in providing better service in our screening camps to detect breast cancer.

How does iBreast Exam work?

iBreast Exam's sensors **accurately assess & identify tissue elasticity differences between hard & stiff breast tumors versus normal breast tissue**. The patented tactile sensor technology using Piezoelectric Sensor Array was invented by the scientists and doctors at Drexel University. It is a novel, quantitative and low cost elastic modulus (E) sensor that can measure tissue compression and stiffness by top down touching of the skin surface. iBE's ability to apply a gentle force and measure the subtle displacements electrically, all within the sensor, makes for an ideal 'electronic palpation' sensor for in-vivo breast imaging.
